

MAGNET MATH PATHWAYS

The standard pathway starts with Mag PCal AB and culminates in Multivariable Calculus. Students may be invited to take Functions. In exceptional cases other pathways are possible, but the minimum path for a student to remain in the SMCS program must include math all 8 semesters and either Analysis I or AP Calculus BC. Variations from the standard pathways, including pathways for students who have not yet taken Geometry, require approval of the math resource teacher and magnet coordinator.

All SMCS students are required to take either AP Statistics or Applied Statistics during their junior year as preparation for the research component of the SMCS program.
