

June 17, 2019

Dear Wootton High Families,

With fostering student success in mind, Wootton High School will be using Delta Math for the Calculus summer assignment this year. Delta Math is a computer based program that runs ONLY WITH GOOGLE CHROME. The program helps students reach mastery of crucial prerequisite skills for AP Calculus by providing sample problems, practice problems, and immediate feedback to students. Students in Mid-level Precalculus, Honors Precalculus and CAPPs who have registered for Calculus classes are expected to complete the respective assignments. These students were provided instruction on how to access the assignments at the end of this past school year. New enrollments and students with schedule changes should check the Math website for instructions on enrolling.

The questions will be scored on the computer, but students should create a portfolio of their work. Not all assigned questions will require written work, but if necessary, work should be neatly labeled and well organized. Teachers and students discussed the expectations for work during the last week of school. There will be a participation grade assigned to this activity. The grade will be based on the level of completion. Students do not have to work on the assignments in order. All work should be completed by August 30, 2019.

Sincerely,

Thomas S. Wootton High School
Math Department
